7. Operations - Labour	9
7.1. Labour Cost vs Revenue	9
7.2. Labour Cost by Department	9
8. Seasonality & Calendar Context	10
9. Recommendation for July 2024	10

1. Executive Summary

June 2024 delivered a mixed but fundamentally healthy result. Gaming revenue eased month-on-month due to the absence of an active promotional campaign and one fewer weekend trading day, but it remains substantially ahead of June last year. Membership growth continued; the active base is engaged across all tiers, and labour cost discipline held steady. The standout risk for the month is not financial - it is data integrity, with several known issues requiring action before next month's figures are finalised.

GAMING NGR	ACTIVE MEMBERS	F&B REVENUE	LABOUR COST RATIO
\$1.38M	54,560	\$731.5K	5.4%
▼ 5.2% MoM ▲ 31.5% YoY	+1,396 new this month	16.5% from walk-ins	of total revenue

Key Takeaways

- Gaming NGR of \$1,380,529 is down 5.2% on May but up 31.5% on June 2023 - the May result included a stronger run of weekend trading days, which largely explains the dip.
- No promotional campaign was active during June. The current cycle runs quarterly (Jan/Apr/Jul/Oct); June sits between the April wave's tail and the July launch. This is a scheduling gap worth reviewing, not a performance failure.
- Membership grew by 1,396 net new members with zero recorded churn events in the month, though 596 active members (1.1% of the base) have now gone 60+ days without a visit and are at risk of lapsing.
- Data quality requires attention: a known points-ledger duplication issue and unvoided POS reversals affected loyalty balances and a small share of F&B revenue this month (Section 6).
- Labour cost held at 5.4% of total revenue with overtime contained to 1.8% of hours worked, in line with a well-run trading month.

2. Gaming Performance

Gaming remains the dominant revenue stream for the club. This section covers Net Gaming Revenue (NGR) trend, hold percentage variance against theoretical, and machine-level performance for floor allocation decisions.

2.1. Monthly NGR Trend

Metric	June 2024	May 2024	MoM	June 2023	YoY
Net Gaming Revenue	\$1,380,528.95	\$1,456,857.25	-5.24%	\$1,049,826.97	+31.50%
Turnover	\$13,759,949.55	\$14,550,499.80	-5.43%	\$10,601,067.58	+29.8%
Jackpot Payouts	\$290,986.13	\$186,739.08	+55.82%	\$176,842.56	+64.55%
Avg Hold %	11.06%	10.99%	+0.62%	10.96%	+0.90%
Variance to Theoretical	-\$105,545.56	-\$114,596.73	\$9051.17	-\$95,088.28	-\$10457.28

Note: the negative variance to theoretical (-\$105,546) means machines ran slightly "cold" relative to their configured theoretical hold this month - a normal statistical fluctuation at this volume, not a mechanical or integrity concern.

2.2. Performance by Gaming Area

Gaming Area	NGR	Turnover	Avg Machines	Avg Hold %	NGR/Mach/Day
Main Floor	\$681,277	\$6,862,946	284	10.86%	\$79.96
VIP Lounge	\$225,282	\$2,254,016	99	10.89%	\$75.85
Sports Bar	\$215,463	\$2,136,544	94	10.99%	\$76.41
Smoking Area	\$138,576	\$1,384,080	60	11.04%	\$76.99
High Limit Room	\$119,929	\$1,122,365	53	11.49%	\$75.43

High Limit Room carries the highest average hold (11.49%), consistent with its lower-volume, higher-stakes profile. Main Floor remains the primary revenue engine by absolute NGR and machine count, with the strongest NGR-per-machine-per-day figure of the five areas.

2.3. Machine Performance - Top & Bottom Performers

Ranked by Net Gaming Revenue for June 2024. Use this list to inform floor reallocation and maintenance scheduling decisions.

Top 10 Machines

Machine	Area	Type	Manufacturer	NGR	Sessions
EGM0522	Main Floor	5-Reel Video	AGS	\$5,568.17	41
EGM0553	VIP Lounge	5-Reel Video	Scientific Games	\$4,421.65	50
EGM0285	Main Floor	3-Reel Classic	Ainsworth	\$4,361.60	38
EGM0179	Main Floor	5-Reel Video	IGT	\$4,313.57	41
EGM0323	Sports Bar	Keno Terminal	Konami	\$4,256.01	45
EGM0180	Main Floor	3-Reel Classic	Aristocrat	\$4,248.53	30
EGM0558	Main Floor	Multi-Game	Aristocrat	\$4,237.50	40
EGM0003	VIP Lounge	5-Reel Video	IGT	\$4,215.68	48
EGM0585	Main Floor	Keno Terminal	Aristocrat	\$4,166.11	48
EGM0314	High Limit Room	5-Reel Video	Scientific Games	\$4,158.08	47

Bottom 10 Machines

Machine	Area	Type	Manufacturer	NGR	Sessions
EGM0090	VIP Lounge	5-Reel Video	Scientific Games	\$1,125.42	32
EGM0578	Main Floor	3-Reel Classic	IGT	\$1,112.73	38
EGM0312	VIP Lounge	5-Reel Video	Ainsworth	\$1,087.03	26
EGM0476	Main Floor	Keno Terminal	Ainsworth	\$1,076.45	33
EGM0145	Smoking Area	5-Reel Video	Aristocrat	\$1,075.23	33
EGM0009	Main Floor	5-Reel Video	Aristocrat	\$1,066.20	22
EGM0386	Main Floor	5-Reel Video	Scientific Games	\$1,040.20	24
EGM0107	VIP Lounge	5-Reel Video	Scientific Games	\$1,019.80	32
EGM0063	Main Floor	3-Reel Classic	AGS	\$944.11	32
EGM0102	Sports Bar	Video Poker	Ainsworth	\$888.81	33

Recommendation: the bottom 10 machines are concentrated in the Main Floor and VIP Lounge with low session counts (22-38). Before relocating, confirm these aren't simply newer or recently relocated units still building player familiarity.

3. Membership & Loyalty

3.1. Membership Movement

NEW ENROLMENTS	CHURN EVENTS	NET CHANGE	AT CHURN RISK
1,396	0	+1,396	596
June 2024	recorded in June	active members	60+ days inactive

Zero churn events were recorded against members in June, which is consistent with this dataset's churn-dating logic (churn is back-dated at a minimum of 90 days post-enrolment and only assigned up to a model cut-off). The more actionable signal is the 596 active members who have not visited in 60+ days - these are the members likely to convert to churned status in the coming months without intervention.

3.2. Visit Activity & Spend by Loyalty Tier

Tier	Active Members	Visits (June)	Avg Visits / Member	Tier Spend	Avg Spend / Member
Bronze	21,817	7,734	0.35	\$346,324.80	\$15.87
Silver	15,272	13,058	0.86	\$940,097.25	\$61.56

Gold	9,827	15,444	1.57	\$1,616,130.10	\$164.46
Platinum	4,881	13,099	2.68	\$1,947,599.08	\$399.02
Diamond	2,763	11,827	4.28	\$2,939,884.83	\$1,064.02

The tier gradient is exactly as designed: Diamond members visit 12x more often than Bronze and spend 67x more per member. Diamond and Platinum together represent only 14% of the active base (7,644 of 54,560 members) but contribute 59% of total tier spend - the clearest single argument for protecting and growing these two tiers in any retention strategy.

3.3. Members At Churn Risk

596 active members (1.1% of the base) have had no visit in 60+ days as of 30 June 2024. The overwhelming majority (592 out of 596) sit in the Bronze tier, with only 4 in Silver and none in Gold, Platinum, or Diamond. This is a useful early-warning list for the reactivation campaign queue ahead of the July promotional wave.

4. Revenue Mix

4.1. Member Spend Composition

Category	Revenue	% of Member Spend
Gaming	\$6,795,438.26	82.4%
Food	\$779,122.68	9.4%
Bar	\$527,952.75	6.4%
Other	\$149,284.75	1.8%
Total Member Spend	\$8,251,798.44	100.0%

Note: "Gaming" here reflects each member's allocated wagering activity recorded at visit level, which is a larger figure than the club's actual Net Gaming Revenue reported in Section 2 (the difference is returned to players as payouts). The two metrics measure different things and are not directly comparable.

4.2. Food & Beverage: Members vs Walk-In

Customer Type	Transactions	Revenue	% of F&B Revenue
Member	20,594	\$610,738.42	83.5%
Walk-In	3,205	\$120,782.12	16.5%
Total	23,799	\$731,520.54	100.0%

Walk-in traffic contributes a meaningful 16.5% of F&B revenue, underscoring that the club's dining and bar offering draws non-member patrons from the surrounding area, not just gaming visitors.

4.3. Outlet Performance

Outlet	Revenue
Kiosk 2	\$106,352.84
Main Restaurant	\$106,333.67
Coffee Lounge	\$105,107.72
Function Centre	\$104,166.93
Bistro	\$103,638.67
Kiosk 1	\$103,487.74
Sports Bar	\$102,432.97

Outlet revenue is evenly spread across all seven F&B venues (within a \$4,000 band), suggesting balanced patronage rather than dependence on any single outlet.

5. Promotions & Campaign Effectiveness

No promotional campaign was active during June 2024 itself - campaigns in the current cycle launch quarterly on 1 January, April, July, and October, and the April 2024 wave's offers had fully expired by mid-May. This section reports on the most recently completed wave (April 2024) as the relevant input for evaluating campaign strategy ahead of the July launch.

5.1. April 2024 Campaign Wave - Performance by Promo Type

Promo Type	Targeted	Redeemed	Redemption %	Cost	Uplift	ROI
Reactivation Offer	17,406	7,897	45.4%	\$267,549.75	\$1,229,374.14	4.59x
Points Multiplier	1,927	878	45.6%	\$29,684.45	\$136,216.61	4.59x
Birthday Bonus	16,593	7,511	45.3%	\$253,460.04	\$1,161,891.00	4.58x
Restaurant Voucher	5,068	2,314	45.7%	\$77,988.23	\$355,856.49	4.56x
Tier Upgrade Bonus	6,239	2,798	44.9%	\$95,601.12	\$435,568.54	4.56x
Lucky Draw Entry	14,821	6,684	45.1%	\$228,356.84	\$1,025,904.55	4.49x

5.2. Performance by Channel

Channel	Targeted	Redeemed	Redemption %	ROI
Post	3,217	1,495	46.5%	4.69x
Email	24,748	11,270	45.5%	4.63x
App	12,467	5,686	45.6%	4.58x
In-Club Kiosk	6,176	2,743	44.4%	4.46x
SMS	15,446	6,888	44.6%	4.45x

All six promo types and all five channels delivered a remarkably consistent 4.4-4.7x ROI, with overall redemption at 45.3% across 62,054 targeted offers, \$952,640 in campaign cost, and \$4,344,811 in attributed revenue uplift. Post performed best on both redemption rate and ROI despite being the lowest-volume channel - worth a small-scale test of increased mail volume next cycle.

Action: Review the quarterly campaign calendar so a smaller "bridge" offer covers months like June and September that currently sit in promotional gaps, rather than leaving six to eight weeks with no active offer running.

6. Data Quality Audit

Per standing practice, the data quality gate was run before any of the figures in this report were finalised. Two issues were found that affect reported figures and are flagged here for visibility; neither was material enough to change the headline numbers above, but both should be corrected before next month's close.

6.1. Member Master Data (dim_members)

Field	Issue	Count	% of Members
date_of_birth	NULL	2,173	3.10%
date_of_birth	Future date (e.g. 2030)	1,398	2.00%
date_of_birth	Implausible (pre-1900)	739	1.06%
email	NULL	1,380	1.97%
email	Placeholder duplicate	1,353	1.93%
phone	NULL	2,063	2.95%
postcode	NULL	1,350	1.93%

None of these issues affects this month's revenue or gaming figures, but they materially limit the usefulness of any age-based or contactability-based segmentation until cleaned. Recommend a one-off remediation sprint rather than letting this accumulate further.

6.2. Loyalty Points Ledger - Duplicate Transactions

0.50% of all ledger rows (1,681 of 337,940) are exact duplicates - same member, date, transaction type, source, points, and reference. This is consistent with a replay or retry issue in the points-posting process rather than genuine double-earning by members.

6.3. Points Balance Reconciliation

67,610 of 70,000 members (96.6%) show a variance between their stored lifetime point balance and the sum of their individual ledger transactions. Given the scale, this points to the lifetime balance fields being calculated from an earlier or differently filtered run than the ledger that downstream reporting now relies on. Recommend re-deriving lifetime_points_earned and lifetime_points_redeemed directly from the ledger as the single source of truth, rather than maintaining a separately updated summary field.

6.4. Point-of-Sale: Unvoided Reversals

Period	Unvoided Negative Transactions	Revenue Impact
June 2024	207	-\$6,362.82
All-time (to date)	6,271	-\$188,787.19

These are refunds or reversals where the negative amount was recorded, but the is_void flag was never set. The June impact (-\$6,363) is immaterial against \$731,520 in monthly F&B revenue, but the all-time figure (-\$188,787) suggests a systemic gap in POS reversal handling that is worth a process fix rather than a recurring monthly write-off.

7. Operations - Labour

7.1. Labour Cost vs Revenue

TOTAL LABOUR COST	TOTAL HOURS	OVERTIME HOURS	LABOUR / REVENUE
\$451,232	9,918	176	5.39%
June 2024	all departments	1.8% of hours	of \$8.37M total revenue

A labour cost ratio of 5.4% against total member spend and walk-in F&B revenue is a healthy result for a club of this scale, with overtime well controlled at under 2% of total hours worked.

7.2. Labour Cost by Department

Department	Cost	Hours	Overtime Hours	OT % of Hours
Gaming	\$144,813.94	3,247	65	2.00%
Food & Beverage	\$89,468.82	1,906	30	1.57%

Bar	\$80,579.26	1,774	40	2.25%
Administration	\$40,768.51	896	16	1.79%
Entertainment	\$32,559.99	644	4	0.62%
IT	\$17,144.95	377	5	1.33%
Accommodation	\$14,469.19	339	5	1.47%
Finance	\$13,107.22	367	7	1.91%
Gym	\$9,462.75	232	2	0.86%
HR	\$5,612.23	136	2	1.47%

Gaming and Bar carry the highest overtime ratios (2.00% and 2.25% respectively), consistent with being the two departments most exposed to weekend and evening peak-trading demand.

8. Seasonality & Calendar Context

June 2024 contained one NSW public holiday (King's Birthday, 10 June) and ten weekend days. The day-type breakdown below explains a meaningful share of the day-to-day NGR variation seen across the month.

Day Type	Days	Total NGR	Avg NGR / Day
Weekend	10	\$614,403.16	\$12,288.06
Weekday	19	\$734,132.76	\$7,727.71
Public Holiday	1	\$31,993.03	\$31,993.03

The single public holiday in June generated more than double the average weekend day's NGR (\$31,993 vs \$12,288), consistent with the elevated holiday trading pattern built into the club's seasonal calendar. Weekends overall run 59% above weekday NGR - the standard pattern for a suburban club with strong Friday/Saturday trade.

9. Recommendations for July 2024

Commercial

- Launch the July promotional wave with confidence - April's wave returned a consistent 4.4-4.7x ROI across all promo types and channels, with no clear underperformer to cut.
- Target the 596 at-risk members (592 of them Bronze tier) with a Reactivation Offer in the July wave before they convert to formally churned.
- Consider a lightweight "bridge" promotion for non-launch months (June, September) to close the promotional gap identified in Section 5.

Data Quality

- Re-derive dim_members.lifetime_points_earned and lifetime_points_redeemed directly from the ledger to resolve the 96.6% reconciliation variance found in Section 6.3.
- Investigate the points-ledger posting process for the retry/replay pattern causing the 0.50% duplicate rate.
- Schedule a one-off remediation sprint on member contact data (DOB, email, phone, postcode), given the cumulative ~3% NULL/invalid rate across multiple fields.

Operations

- No action required on labour - cost ratio and overtime; both sit within healthy bounds for the month.
- Monitor the bottom-10 machine list in Section 2.3 for a second consecutive month before considering floor relocation, to rule out a temporary dip.
